Personal Profile:

Having more than 10 years of experience to deal with special need kids. The wings learning center provide therapies in a very structured manner which is organised in a playful, positive and comfortable environment to develop children's speech, language, cognitive skills and play skills individually and in peer group. We integrate play therapy into our practices.

Our focus is completely on children's overall development which include communication development , awareness to environment, and express his/her need. We use different approaches during the therapies like puppet play, storytelling, social play, sensory play, rhymes etc., establishing the bond and establishing relationship with the child is specifically

our primary goal that developed by direct interaction and pure pairing with the child and also we use different materials to engage the child in playful learning like music, musical instruments, singing song, toys, sensory toys, water play, pretend play, role play, etc. as play therapy is differs from regular play in that by using play therapy approaches we make the children learn to communicate with others, express feelings, modify behaviour, and develop problem solving skills etc.
